PRODA Prove Commitment to Information Security and Secure ISO 27001 Certification

PRODA announced today that they are now officially ISO 27001 certified.

ISO 27001 is the international standard for information security management. The ISO standard includes a process-based approach to initiating, implementing, operating, and maintaining Information Security Management Systems (ISMS). It is essential for protecting vital assets like client information and other private information.

PRODA demonstrated their dedication and commitment to upholding the highest standards of information security, which saw them being awarded the accreditation. With information security at the top of most organisations' agendas, the certification further solidifies PRODA's commitment to protecting their users' data.

Following the announcement, Colin Macandrew, VP of Engineering at PRODA said, "This is a huge milestone for a start-up to achieve so early on and is the result of all of the hard work from everyone behind the scenes here at PRODA." He added. "We're delighted to be able to kick-start the new year and share the news that further proves our commitment to our user's information security, which will continue to remain a priority for us in 2021, and beyond."
